

## Campus of the Future: the Bult en 't Strân.

NHL Stenden is working on the development of the campus of the future. Investment in sustainability (SDG3) and greening is essential for the development towards a meaningful campus.

Through a shared vision on the development of the public space/outdoor environment on campus (see vision map) and an action plan, a meaningful contribution can be made to the campus of the future in co-creation (stakeholders in collaboration with courses such as Minor Placemaking).

The Nordic Campus mindset and the brand values (Brand Values [Brand Values Nordic Campus | Nordic campus](#)) are a starting point to work with and for students. By facilitating real life assignments, by among others the minor Placemaking, and with the realization of a number of meaningful places, we will create a prelude to the campus of the future.

A next location has been targeted to develop by various stakeholder like the municipality and entrepreneurs, under the direction of FM/Nordic. This location is on municipal land and is partly used as a dog walking area (see vision map and images). Placemaking can make a great contribution to this by creating a meaningful design for this place, in which the 'Connecting@NordicCampus' committee (all stakeholders on the campus site) and the brand values of the Nordic Campus have a connecting role. Since the area/location is municipal land, the municipality of Leeuwarden will act as your client.
